

Dear Valued Customer,

Over the last few years C&J has added fabrication, hardfacing, localized PWHT and NDE services to our world class cladding capabilities. As a result of these added service offerings and limited space at our Brittmoore Road location, C&J Cladding will be relocating our main operations from our Brittmoore Road facility to the Willowbrook area in Houston, Texas. Starting April 22<sup>nd</sup>, we request that all deliveries and pick-ups take place at our Willowbrook address, unless you are notified otherwise.

Our operations have been coordinated to make this transition with minimal impact to production and while we do not expect a major impact to deliveries during this transition any delays will be promptly communicated.

We have been in contact with OEM's over the past few months regarding our AVL status, and we have coordinated this move with them. Our ISO 9001:2015 certification, ASME U Stamp and National Board R stamp are certified to our new Willowbrook address, which is attached for your records. We have also attached an updated copy of our 2019 W-9, for our new location.

Our new facility will be a state of the art, custom designed, manufacturing facility offering 30,000 square feet of air-conditioned shop space with 20 ton lifting capacity and total of 12 cranes (bridge, jib & gantry). C&J will continue to operate out of our high capacity Ley Rd facility (9031 Ley Road) where we have 60 ton lifting capacity, on an as needed basis.

Our new Willowbrook facility is located near Willowbrook Mall, on the Northwest side of Houston near Beltway 8 and Hwy 249, as shown on the next page. The new facility is a short 15 minute drive from our current location and address is as follows:

**6611 Willowbrook Park  
Houston, TX 77066**

If you have any questions or would like to visit our new facility, please reply directly to this email. Once our move is completed we will be having a grand opening celebration which we will provide invitations to in the near future.

Regards,

**John Andreadis**
